The biggest in the world

## The Swiss Army knife sets a new Guinness World Record

---

The biggest Swiss Army knife ever produced is Swiss. It contains no fewer than 87 tools offering 141 functions. This XXL toolbox is manufactured by Wenger in Delémont, Jura Mountain, Switzerland. The Guinness World Records judges have just awarded it the title of “*Most multifunctional penknife*”.

“*And what if we put all our Swiss Army knife tools in one single model?*” That is how, one morning, the biggest knife in the world was born. The initial aim was not to win the famous certificate, but simply to check that we were capable of achieving this technical feat. Then some collectors got wind of the existence of this unique model and were very keen to get their hands on it. So, exceptionally, we produced a second model for an enthusiast, then a third and a fourth and so on. Today, two cutlery specialists assemble this XXL toolbox by hand. This model is the most coveted knife by collectors. And not without a reason! It contains everything that we could possibly include in a pocket knife! It even has a golf reamer, along with a magnifying glass, compass, hexagonal key, Philips screwdriver, multipurpose pliers, cigar cutter, laser pointer, etc. It weighs 1.345 kg and comes with a wooden case and a certificate.
